

AUREA 8204

The **AUREA 8204** is a reinforcement screen system to be located OVER some **AUREA 8104** or **AUREA 8106** when the acoustic pressure of the medium/treble frequencies is not enough to reach the last rows of seats or balconies.

We could use one unit per balcony, if we have more than one, or two, or three.

This means it is meant for very long cinemas.

An additional amplifier is needed for this application.

The **AUREA 8204** is a passive system, delivers good medium and treble frequencies and includes an internal crossover processor.

The support to be added to the below cabinet is delivered.

This system has a **polyurea finish**.
